Caring People Helping Others

EZVU Video Magnifier

- Full color
- Sony Video Technology
- Easy to use
- 1 Year Warranty

Who it helps:

Low vision sufferers inflicted with Macular Degeneration, Glaucoma, RP or similar vision impairments.

What it does:

Provides excellent magnification with a vividly clear full color picture on your TV. (Optional accessories allow for viewing on a Computer/Laptop or Computer/VGA monitor). Allows low vision sufferers to read, view pictures and different items, write, and perform tasks. Low light camera allows for use in dim lighting for people with sensitive eyes and also eliminates glare.

How it Works:

Connects to the Video Input of a TV (not included) or, with optional accessories, the USB port of a Computer/Laptop or the VGA connector of a Computer Monitor. Views a small area, ~ 1/3 inch to 4.75 inches wide, and displays this area on the much larger screen providing excellent magnification. (The smaller the area viewed, the greater the magnification).

Examples of magnifications on standard screens:

15 inch screen: 3 to 33 times magnification
25 inch screen: 4 to 56 times magnification
36 inch screen: 6 to 80 times magnification

Magnification is changed by moving the camera closer or farther from the object, or by changing the tele-foto setting on the lens. The lens is manually focused to obtain a clear picture.
